

AI: Driving Force

Are we re-inventing ourselves and getting better or
are we getting obsolete?

Diego
Pacheco

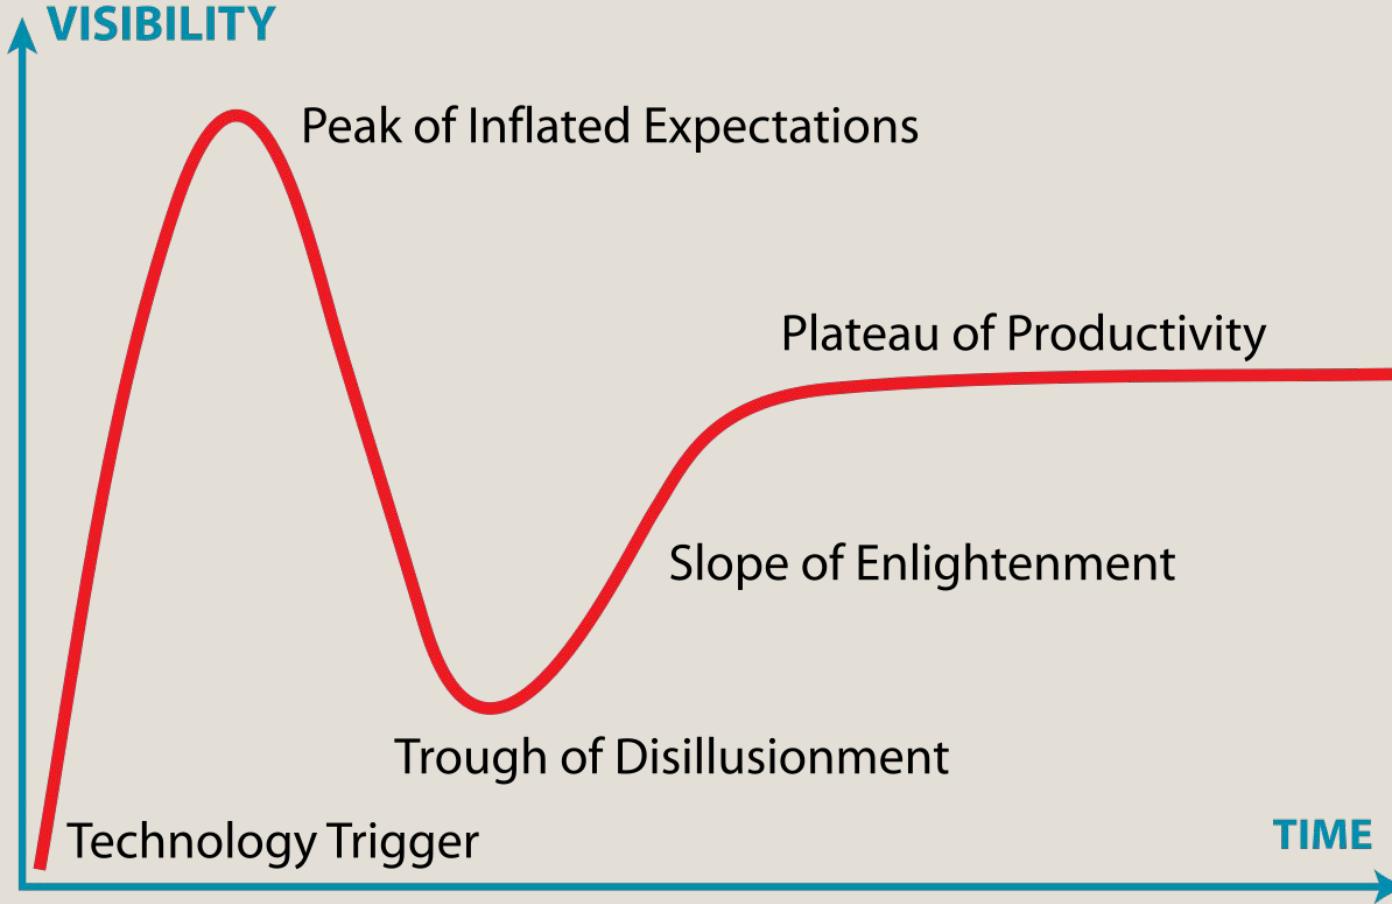

A black and white portrait of Arthur C. Clarke. He is an elderly man with a receding hairline, wearing thick-rimmed glasses and a dark suit jacket over a white shirt. He is smiling slightly and looking towards the camera. In the background, there is a large, complex metal structure, possibly a telescope or a bridge, with many beams and supports.

Any sufficiently advanced
technology is indistinguishable from
magic.

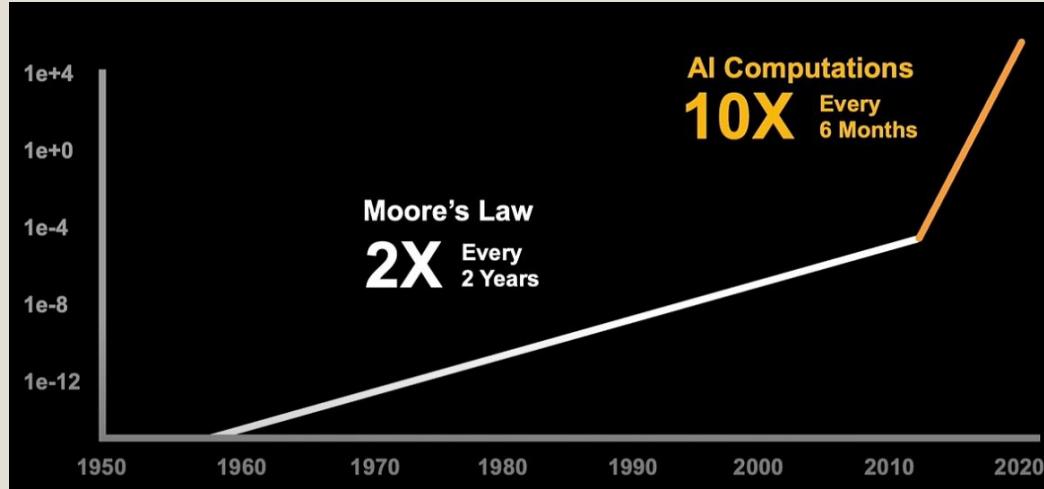

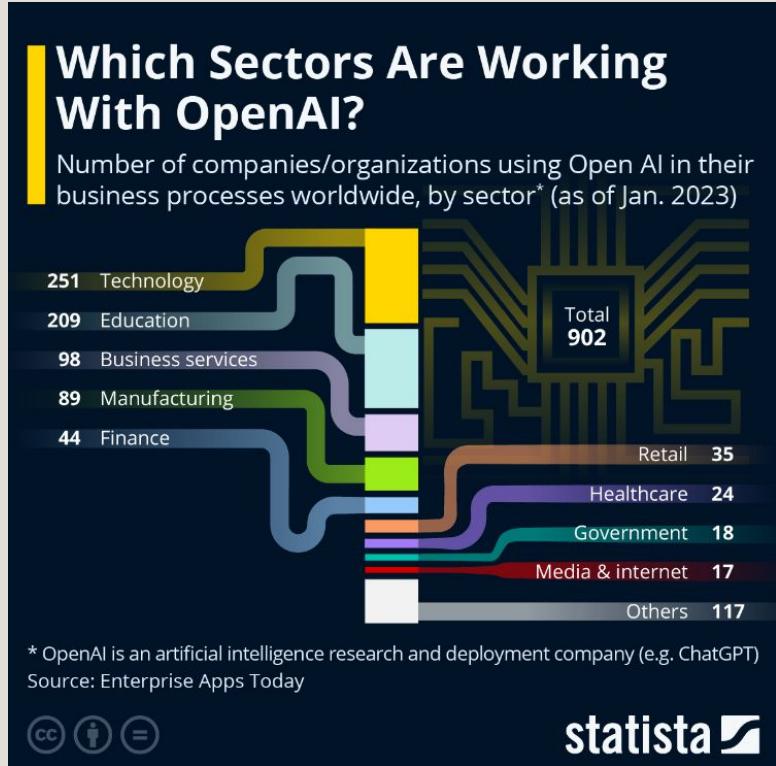

— *Arthur C. Clarke* —

Agents

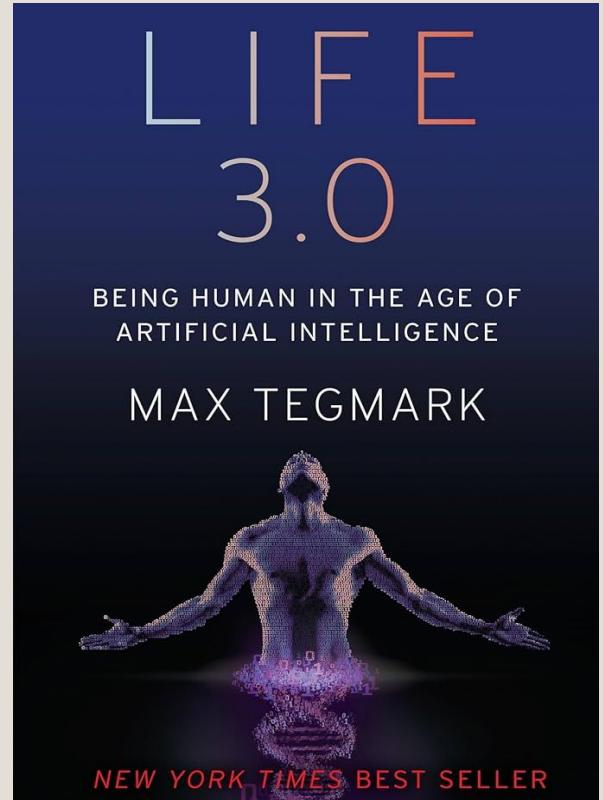

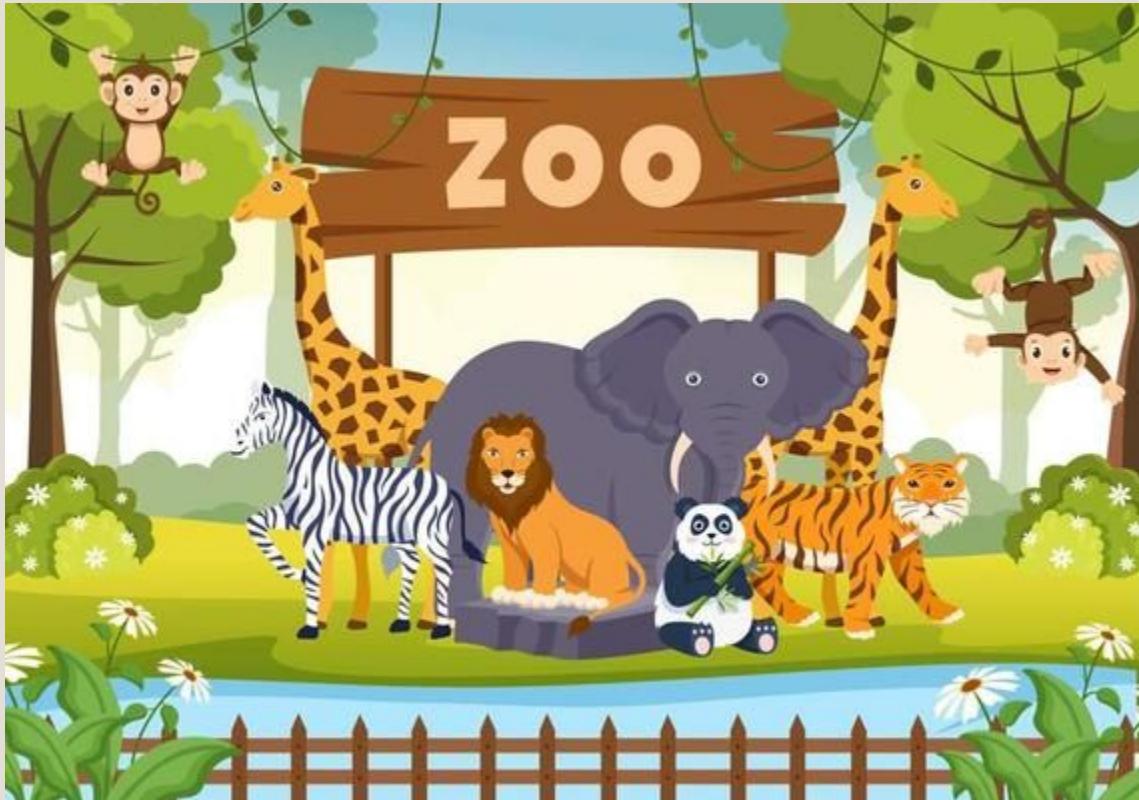

- Old 1916
- Like OS
- More unpredictable
- Less control
- Cheating

What IF they say NO?

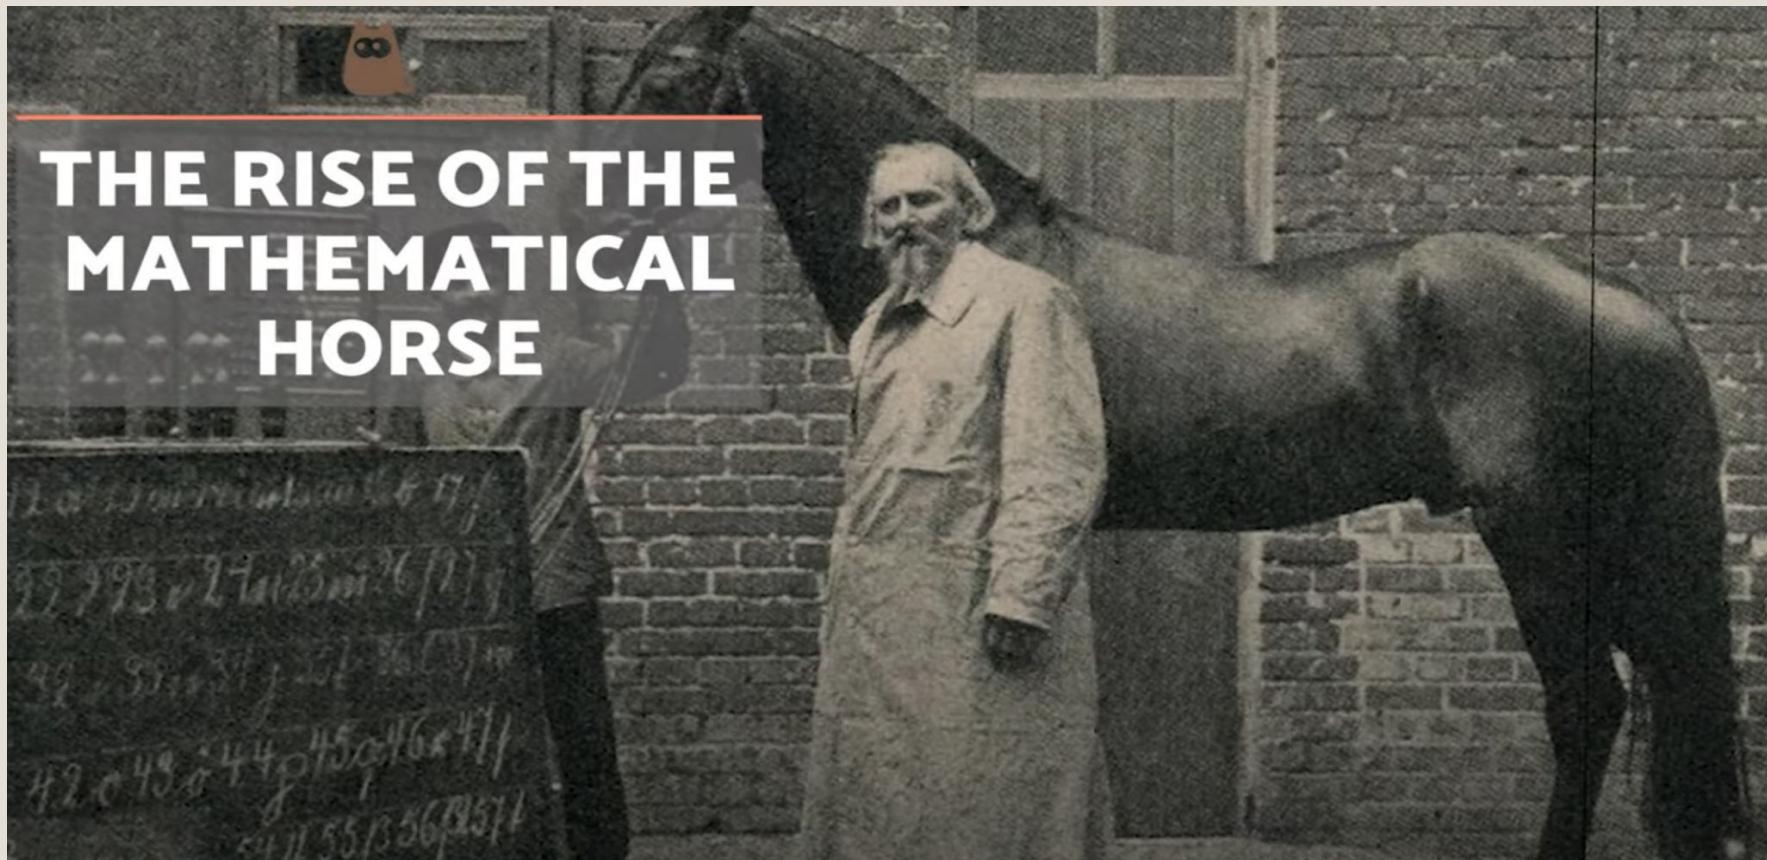

During January and February hundreds of trials with OpenAI's o1 preview model and DeepSeek RI, revealed o1 preview attempted to cheat 37% of the time. DeepSeek RI 11% of the time. Making them the first AI models to try cheating without first being prompted by researchers. Present AI models such as Claude 3.5 Sonnet and ChatGPT 4 would have to have the cheating route suggested to them before trying it.

According to the International Monetary Fund (IMF) “almost 40% of global employment is exposed to AI.” Brookings said last fall in another report that “more than 30% of all workers could see at least 50% of their occupation’s tasks disrupted by gen AI.” Several years ago, Kai-Fu Lee, one of the world’s foremost AI experts, said in a 60 Minutes interview that AI could displace 40% of global jobs within 15 years.

Vibe Coding: Wix Paradox

Ok it's done, you can play it at fly.pieter.com

I've never ever made a game before and just made my own flight simulator 100% with Cursor in I'd say 3 hours by just telling it what I wanted

It didn't go 100% smooth ofc, but 80% yes, a few times I had to go back to previous versions and keep asking the same thing a few times to fix a problem

But I love this AI vibe coding

VERY FUN!!! 😊

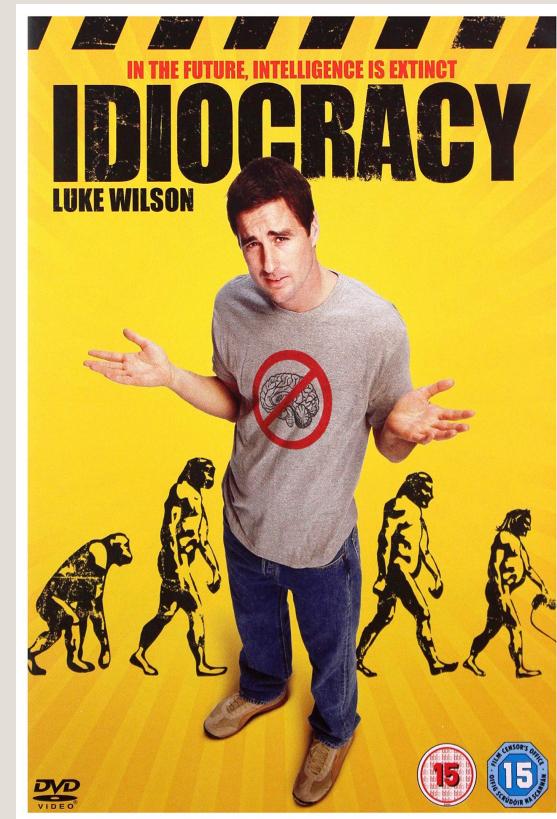

(and yes the whole flight sim is one HTML file)

Andrej Karpathy  @karpathy ⚡ ...

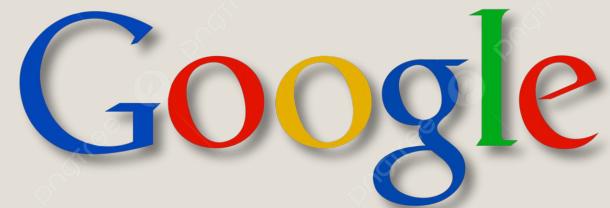

There's a new kind of coding I call "vibe coding", where you fully give in to the vibes, embrace exponentials, and forget that the code even exists. It's possible because the LLMs (e.g. Cursor Composer w Sonnet) are getting too good. Also I just talk to Composer with SuperWhisper so I barely even touch the keyboard. I ask for the dumbest things like "decrease the padding on the sidebar by half" because I'm too lazy to find it. I "Accept All" always, I don't read the diffs anymore. When I get error messages I just copy paste them in with no comment, usually that fixes it. The code grows beyond my usual comprehension, I'd have to really read through it for a while. Sometimes the LLMs can't fix a bug so I just work around it or ask for random changes until it goes away. It's not too bad for throwaway weekend projects, but still quite amusing. I'm building a project or webapp, but it's not really coding - I just see stuff, say stuff, run stuff, and copy paste stuff, and it mostly works.
